USE AND CARE INFORMATION

- Check the accessory mounts frequently and retighten if necessary.
- Replace this accessory with a new one if it is damaged or discolored excessively.
- When this accessory becomes dirty, rinse it thoroughly with cool water to remove loose dirt, then wipe with a clean cloth or sponge.
- Do not use a brush to clean this accessory as it may scratch the surface.
- Never use petroleum solvents such as gasoline, thinner, benzine, acid, or alkaline cleaners.

INSTALLATION NOTE:

- Remove and discard the rubber shipping band from the cam lock before installation of this accessory.
OPTIONAL: LED LIGHT BAR PRE-INSTALLATION
If you purchased the optional LED Light Bar (P/N 0SV31-HL4-301), complete the following steps to prepare the roof for later installation of this accessory.

- Print both template pages. Templates must be printed 'Actual Size'.
- Cut out both templates, including the holes. Tape both templates together along the joining edge.
- Place the template over the surface of the roof as shown, aligning the holes in the template with the holes in the roof.
- Insert a 6 x 20 mm screw into each of the four holes to secure the template to the surface of the roof.
- Drill a hole through the roof at each crosshair on the template using a 5/16" (8 mm) drill bit. Remove the template.

1. Install a front-side bracket to the bottom of a cam lock using two 6 x 18 mm screws and flat washers, noting the orientation of the cam lock as shown.

2. Repeat Step 1 for the remaining front-side bracket.
3. Loosely install the front-side, outer brackets to the roof using two 6 x 20 mm screws, flat washers, and nylock nuts per bracket as shown.

4. Install a front-center bracket to the bottom of a cam lock using two 6 x 18 mm screws and flat washers, noting the orientation of the cam lock shown.

5. Repeat Step 4 for the remaining front-center bracket.
6. Loosely install the front-center brackets to the roof using two 6 x 20 mm screws, flat washers, and nylock nuts per bracket as shown.
7. Install two cam locks to the rear edge of the roof using two 6 x 18 mm screws, flat washers, and nylock nuts per cam lock as shown.

8. Open all six cam locks on the underside of the roof.
9. Place the roof on the top of the cab frame and align the clamps around the cab frame bars.

10. Check that the roof is centered over the cab frame and snap closed all six cam locks. Tighten all hardware to the specification in the Torque Chart.
   - There should be no bulging near the base of the clamps or along the edges of the roof panel.
   - If bulging occurs, loosen the hardware until the roof lays flat, then re-tighten the hardware.

11. Adjust cam lock tension by rotating the threaded arm clockwise to tighten, counter-clockwise to loosen.
If you print this template from your local computer, make sure the printer settings do not "scale" or "shrink" the page.
Roof, Passenger Side Drill Template A

If you print this template from your local computer, make sure the printer settings do not 'scale' or 'shrink' the page.
